### What it is

**IC7100BKT**

[Top](#) [Next](#)

**What it is**

[Top](#) [Next](#)

**ATTENTION: this guide has been translated by an automatic system, excuse**

The screenshot displays the IC7300BKT - Cat Control by IZ2BKT software interface. The main window features a central frequency display showing 7.144.000 MHz. To the left, there are control sliders for AF, SQL, PO, and RF. Below these are buttons for Mini, Store, Sync., and Polling. To the right, there are buttons for LSB, Data, Filter:2, and SOFT. The interface also shows various status indicators and meters, including SIG, SWR, PO, COM, ALC, Vd (13 V), and Id (0 A). A menu bar at the top includes options like Mem, Scan, Skeds, Bands, Auto CQ, Voice, Plug-In, On-Air, Set Mode, and UT. The status bar at the bottom shows local and UTC times (Local --> 18:49 - 02/06/2019, UTC --> 16:49 - 2019). The footer displays 'Radio Station : IZ2BKT Operator : NOT REGISTERED'. Two pop-up windows are visible: 'IC7300BKT - PTT' with a microphone icon and controls for PTT Key (CTRL), Tune, and AutoTune; and 'IC7300BKT - AudioRecorder - PCM 11,025 kHz; 8 bit; Mono' with recording controls and a file name 'AUTO'.

The IC7300BKT CAT program controls the ICOM IC-7300 transceiver using a personal computer running Microsoft Windows XP, Vista, 7, 8, 8.1, 10 - 32 and 64 bit.

The main window has the most commonly used commands.

When the cursor hovers over a button or slider a pop-up balloon will display a short description of its

function.

Right clicking on a slider will allow a numerical value to be input for that setting

The LED's located at top left of the window blink at the data transfer rate between the program and the Txvtr.

**Press F1 key to call this guide..**

## Changelog

### Versions

[Top](#) [Previous](#) [Next](#)

Ver. 1.0.1 - 07/07/2019

Correct Power OFF in recursive Skeds

Ver. 1.0.2 - 29/09/2019

Improved Filter management with Mode change

Ver. 1.0.3 - 19/09/2020

Removed bug on NB Width settings and NB Level read after default setting

Ver. 1.0.4 - 02/01/2021

Improved audio device management

Ver. 1.0.5 - 03/01/2021

Added serial port connection speeds up to 115200 BAUD

Ver. 1.0.6 - 08/01/2022

Updated Power ON for connections above 19,200 BAUD

Ver. 1.0.7 - 15/01/2022

Added in the setup the option to disable at startup the CI-V transceive function

Ver. 1.0.8 - 02/06/2023

Correct key loading for the trial version

Ver. 1.0.9 - 10/01/2024

Improved right-click management on sliders

Ver. 1.1.0 - 03/04/2024

Various improvements

Ver. 1.2.0 - 07/01/2025

Added LAN protocol compatible with DX Commander by DXLabs (Replaces BktNetInterface)

Several improvements

Ver. 1.2.1 - 11/01/2025

Removed EnzoLog from On-Air as it is no longer active.

Minor bug fixes.

Ver. 1.2.2 - 23/01/2025

Improved LAN protocol

Ver. 1.2.3 - 29/01/2025

Improved LAN protocol compatibility

Ver. 1.2.4 - 04/02/2025

Correct command to go to TX from LAN protocol

Ver. 1.2.5 - 23/02/2025

Improved LAN protocol for multiple commands

## Program registration

### Program registration

[Top](#) [Previous](#) [Next](#)

All the information on the registration are on: <https://www.maniaradio.it/en/ic7300registrazione.html>.

The activation key is sent via email as an attachment. Please note: the delivery system is automated and may be classified as SPAM by some providers or programs. Therefore, please configure your system to accept emails from the domains iz2bkt.com and maniaradio.it, and authorize attachments in ZIP format.

**The activation key for the Free version is completely free and generated automatically upon first launch, allowing the use of many program functions. Furthermore, it allows you to try out the features of the Full version for 30 days.**

To install the registration key:

Method 1:

Save the <call.IC7300BKT.bkt> key file to the program's installation folder.  
Launch the IC7300BKT program.

Method 2:

Save the <call.IC7300BKT.bkt> file attached to the received email (replace "call" with your specified  
callsign in the registration form) in a folder.

Launch the IC7300BKT program.

When prompted for registration, click on the [Load Key] button.

Select the folder and the file saved in step 1 and click [Open].

Save the activation key to a floppy disk or removable device for backup.

---

## Configuration

---

---

Created with the Personal Edition of HelpNDoc: [Add an Extra Layer of Security to Your PDFs with Encryption](#)

---

## Configuration

### Configuration

[Top](#) [Previous](#) [Next](#)

General configuration of the program.

Is important that the values of communication of the serial port and the address CIV that has to exactly correspond with the values CI-V BAUD and CI-V ADDRES in the IC7100. You advises to care the parameter CI-V BAUD of the transceiver as Auto.

[COM .....] Serial port and external drive setting.

[PTT .....] PTT and antenna tuner setting.

[Audio .....] Audio setting.

[Address CI-V] Exadecimal address of interface CI-V (default = 88).

[S-Meter Calibration] Set up the values [Limit down] and [Divisor] to make to correspond the value read by the S-Meter of the program with that of the RTX.

[Colors] Choose the colors for display and the keys.

[Communication with teh Clipboard] Parameters for a correct exchange of the data with the clusters programs

[UTC Offset] Points out the bewilderment in times among the time UTC and that local. If put to [Auto] for the calculation of the time UTC is used the settings of Windows.

[Log] Generally must be let empty, point out the name of a file in which to save the Log of exchange dates on the serial port.

[Disable CI-V transceive function] Disable at startup the CI-V transceive function.

[Synchronize clock on startup] Enabling this option, the RTX clock is synchronized with one PC to the first change of minute from the start of the programme.

[Change Language] Select the language.

[Timing scan control ( 0 for Auto )] Time in milliseconds for scanner manage function, leave 0 for automatic control.

[Latency time ( 0 for Auto )] Work time in millisecondi, set to zero for the automatic calculation to the start. A too low latency time might cause the data loss between the pc and the rtx, a too high time slows down the reading of the data of the rtx.

[Enable ToolTips] Enable the help balloons

[Check for updates every] Range of days for automatic updates of the program. Set to 0 not to check.

[Enable LAN protocol on port:] Enable the TCP communication protocol on the specified LAN port. This feature includes DX Labs Suite Commander emulation and replaces the BktNetInterface plug-in.

[Font Main Window] Select the font to be used for the main window, [Size] to enlarge or shrink the main window size.

[Font Memory, PTT e Audio Recorder] Select the font to be used for the secondary window, [Size] to enlarge or shrink the secondary window size.

[Restore Default] Restore the default parameters of the program.

Created with the Personal Edition of HelpNDoc: [Free help authoring environment](#)

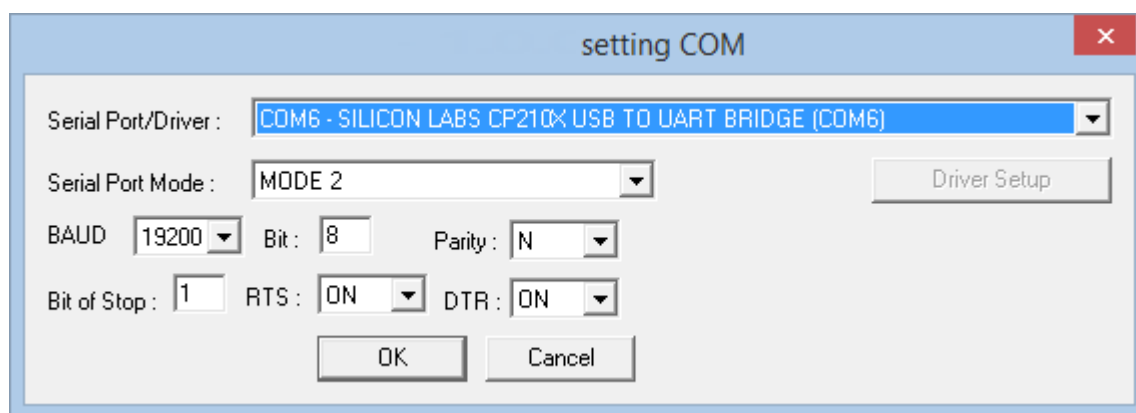

## Configuration COM

### Configuration

[Top](#) [Previous](#) [Next](#)

### Configuration COM

[Top](#) [Previous](#) [Next](#)

These parameters are essential for a good operation of the program. If a transistor [interface](#) is used it is worthwhile to plan RTS and DTR to ON, with an [interface](#) with the MAX232 it is recommended to plan to 19200,N,8,1 with RTS and DTR to OFF. If you have other interfaces connected on the same serial ports (es. interfaces for PSK31), it needs RTS or DTR to OFF to avoid to send in transmission the RTX when he enters the program.

Its possible to select an external driver (es. [BKTCClient](#) for the remote management by TCP/IP), in such case will be activated the key [Driver Setup].

Selecting the driver **BktDummy** the program will work in dummy mode also without the RTX connected.

[Serial Port Mode]: for USB interfaces or for RIGtalk of West Mountain Radio use MODE 1.

#### If there are connection problems try this:

- Change the [Serial Port Mode]
- Change the RTS and/or DTR
- Down the connection speed from 19200 to 9600 BAUD or lower
- Try to use [BKTRS232](#) driver
- Look here : <https://www.maniaradio.it/forum/showthread.php?tid=425>

The connection speed with the Icom IC-7300 can reach 115200 BAUD, if it doesn't work enter in the

radio configuration **Menu->SET->Connectors->CI-V->CI-V USB Port** and select **Unlink from [REMOTE]**, exit the configuration with the back key and switch the transceiver off and on again.

Created with the Personal Edition of HelpNDoc: [Achieve Professional Documentation Results with a Help Authoring Tool](#)

## Configuration PTT

### Configuration

[Top](#) [Previous](#) [Next](#)

### Configuration PTT

[Top](#) [Previous](#) [Next](#)

Configuration of the management of the PTT, that is the possibility to send the RTX in transmission through the program.

[Tune software emulation] Put the RTX in transmission for the time and with power and mode specifies allowing to tune the antenna.

[Use 1KHz tone] Sends 1 KHz note to desired power for the time given to promote the tuning

[Switch USB input while tuning or transmit 1750Hz] When it starts transmitting enables USB input, at the end, rehabilitates the previous input

[Key PTT] Select the key of the keyboard to use like PTT, NONE in order not to use any.

[Key PTT keep in front] Put the window of the PTT always in front of all the other windows.

Clipboard

[PTT ON] Sequence of characters that, if copied in the clipboard of Windows, put the RTX in

transmission.

[PTT OFF] Sequence of characters that, if copied in the clipboard of Windows, put the RTX in reception.

Created with the Personal Edition of HelpNDoc: [Effortlessly Convert Your Word Doc to an eBook: A Step-by-Step Guide](#)

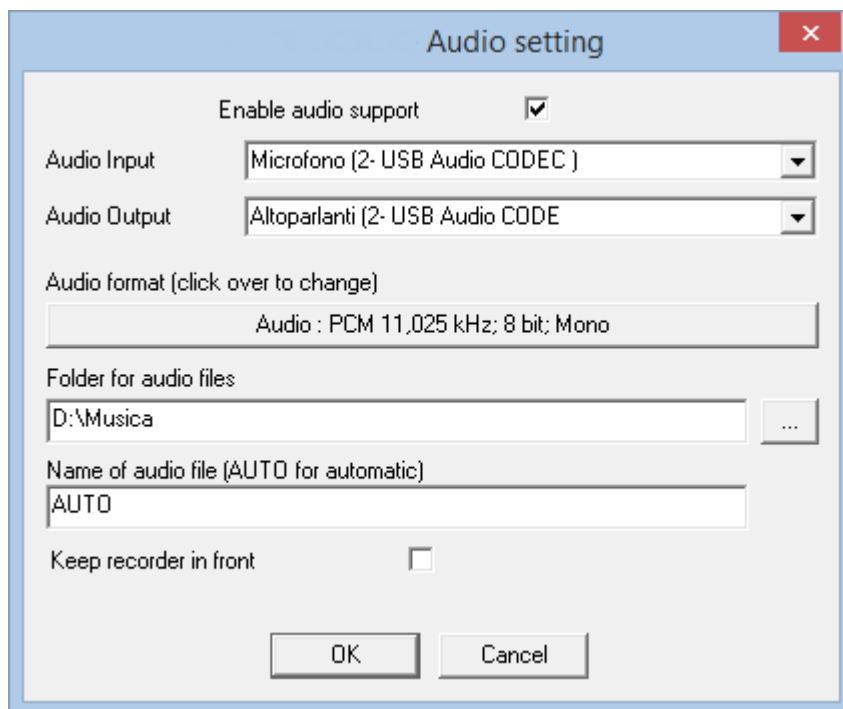

## Audio configuration

### Configuration

[Top](#) [Previous](#) [Next](#)

### Audio configuration

[Top](#) [Previous](#) [Next](#)

- [Enable audio support] **Enable/disable the audio support.**
- [Audio Input] **Chose the audio device for input. Default for windows default device is Microfono (2- USB Audio CODEC).**
- [Audio Output] **Chose the audio device for output. Default for windows default device is Altoparlanti (2- USB Audio CODEC).**
- [Audio format] **Choose the audio format to use for the recording. To record voice communications is preferred to install a CoDec MP3 and choose it. With the configuration in figure, an hour of recording occupies 3,5Mb of disc. To record digital communications them convenient is PCM, in this case the occupation on disc will be much high. The default files audio is WAV.**
- [Folder for audio files] **Folder for saves the audio files. If the field is empty, it comes up where the program is installed.**
- [Name of audio file] **It is possible to specify a default name to use for the files audio. If the field is empty, the default name is AUTO, to the beginning of every recording, a file will be produced with the name BKTyymmddhhmmss.WAV, where yyyear, mmmonth, ddday, hhhour, mmminute and sssecond of beginning recording.**
- [Keep recorder in front] **If activated, the Audio Recorder is always maintained in front of the windows.**

---

## Language selection

### Language selection

[Top](#) [Previous](#) [Next](#)

Select from the list the preferred language.

You can add languages by following this procedure:

1. Copy the file English.lng in the name of the language you want (eg. Franch.lng)
2. Edit with Notepad or BKTLocalize the file created in step 1
3. For each row, after the equals sign, put the phrase translated being careful not to change the codes (%1-% s-% n-\n-etc. ..)
4. Send me the translated file if you want to be published on the website of the programme

---

## Limits of band and mode

### Configuration

[Top](#) [Previous](#) [Next](#)

#### Limits of band and mode

[Top](#) [Previous](#) [Next](#)

**Band and mode limits**

General coverage of RTX

From  Hz To  Hz

Band :  ▾

From  Hz To  Hz

Mode	Low limit Hz	High limit Hz
CW	<input type="text" value="1.800.000"/>	<input type="text" value="1.838.000"/>
RTTY	<input type="text" value="1.830.000"/>	<input type="text" value="1.834.000"/>
LSB	<input type="text" value="1.838.001"/>	<input type="text" value="2.000.000"/>
USB	<input type="text" value="0"/>	<input type="text" value="0"/>
FM	<input type="text" value="0"/>	<input type="text" value="0"/>

From this mask it is possible to define the limits of coverage for the RTX and for every radioamateur bands.

[General Cover of RTX] Point out the minimal and maximal frequency supported by the RTX.

[Read from RTX] Read the min and max frequencies of radio. Please note that these frequencies are not necessarily the absolute min and max.

[Band] To choose the amateur band to modify.

[From] [To] The minimal and maximum frequency of the selected band.

For every mode of emission to indicate wrap it of frequency used inside of the selected band following the amateur BANDPLAN.

[Restore default] Restore the default values of the program.

**ATTENTION: all the values of frequency are in Hz.**

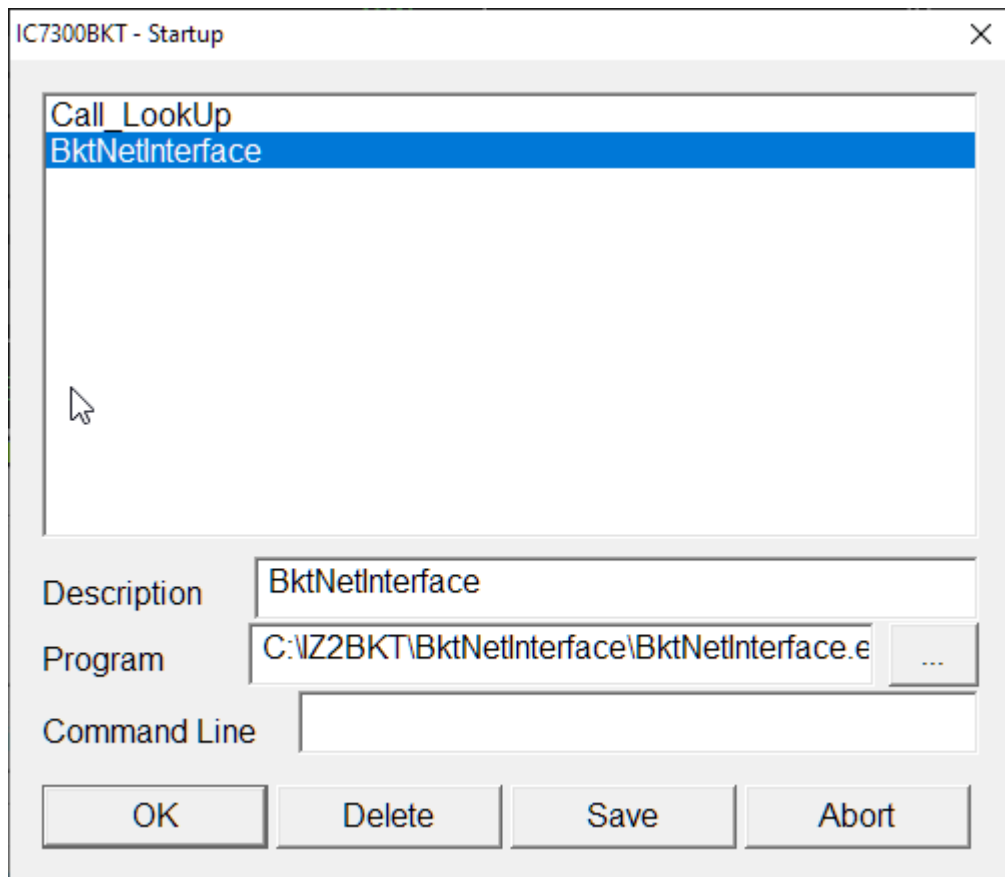

## Startup programs

### Configuration

[Top](#) [Previous](#) [Next](#)

### Startup programs

[Top](#) [Previous](#) [Next](#)

The programs specified in this window will be started to the start of IC7300BKT.

For every program to introduce:

Description: description of the program

Program: program inclusive of path, ex. c:\windows\notepad.exe

Parameters: parameters for the program

[...] find the program

[OK] closes the window saving the possible changes

[Delete] delete the selected program

[Save] save the input

[Abort] closes the window without saving the possible changes

IC7300BKT - Cat Control by IZ2BKT (c) IZ2BKT - Capelli Mauro

<http://www.maniaradio.it>

<http://www.maniaradio.it/forum>

Total run (Days - Hours:Minutes) : 0 - 10:17

Local --> 16:23 - 09/06/2019 UTC --> 14:23 - 09/06/2019

Radio Station : IZ2BKT  
Operator : Mauro

Exit F1- Help Hook Clipboard

In the main window they are present the commands of great use, **stopping itself with the mouse on a key or a slider of the command, while, click with the mouse right key on the sliders or on numerical values to input the value**

The two Led green/red places up to right of the window blink to the passage of data between program and RTX.

**As to change frequency:**

- Click with the right mouse button on the frequency, enter the frequency in Hz and press the Enter key.
- Use the keys + and - disposed to the edges of the frequency display.
- Position the mouse on the frequency display and use the wheel of the mouse.
- Use the function keys F2 through F9 and Shift.

**Information on the main window:**

- Date and hour in local format and UTC.
- Information on the Radio station and Operator.

- Tuning bar. Click and drag the pointer to change frequency. The bar will become of red color when the RTX is syntonized. Press the mouse right key for [numerical input](#) of the frequency.

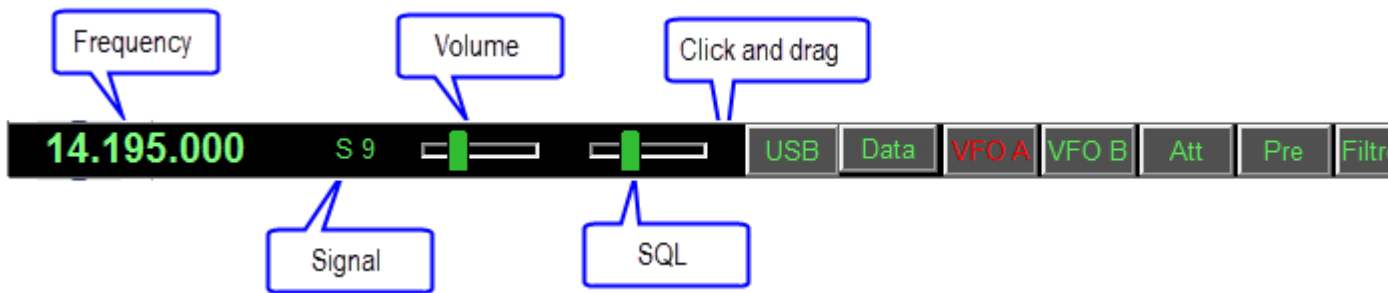

□

**Keys:**

All the keys are easily identifiable, signal:

- [Mini]  
- [Sync.]  
- 
- 
- 
- 
- 
- 
- 
- 
- 
- 

**INTERFACE MINIMIZED:**

Activated by the button [Mini] allows to manage all functions of the radio, taking up little space on the screen.  
 [Full] Restore main window

Every variation, insertion and cancellation effected in this window will be reflected in the memory list. Click on the description of the column, you can change sorting display of memories. Double-click the cell to edit.

- [Delete] Cancel the selected memory.
- [Save] Save the selected memory.
- [Transfer to VFO] Transfer RX Frequency, Mode and Filter to the VFO-A and the TX.
- [Save and Active] Save the selected memory and puts the RTX in Memory mode.

[Synchronize] Synchronize this memory bank with the RTX.  
 [Print] Print the memories as visualized in the grid.

Using the command Copy, Cut and Paste is possible to duplicate or to move memories from a bench to the other or one position.  
 [Copy] Copy the memory selected in the clipboard.  
 [Cut] Copy the memory selected in the clipboard and will cancel it when it comes chosen the function Paste.  
 [Paste] Save the memory in the clipboard on that one selected.

[Delete Block] Deletes a block of memories  
 [Remap] Remaps memories second sorting chosen: click the heading of the column you want to choose the sort order, and click the heading of the column you want to choose the sort order.  
 [Save To File] Saves the current memory bank in a file  
 [Load From File] Load current bank memory from a file previously saved with [Save to File]. WARNING current memories will be overwritten.

[Export] Export the memory bank in a file CSV.  
 [Import] Import the memory bank from a file CSV or a ARRL TravelPlus file. WARNING current memories will be overwritten.

[Memory Mode] Put the RTX in Memory mode and enable the selected memory.

Click on the description of the column for change the ordering of visualization of the memories.

Executes a cyclical search between two frequencies or from the memories of a bank.

[Start frequency]	Frequency of beginning search
[End frequency]	Frequency of end search
[Mode]	Operating mode with which searching, choosing FM or AM it is possible to use the SQL to stop the
[Step]	Step of increment of the frequency
[Filter]	Filter using during the search
[Speed]	The search speed can be Fast or Slow
[Scan Memory]	Executes the search between the memories of the selected bank
[Bank]	Bank to use
[Only selected]	Execute the search only using the memories marked Selected of the bank chosen
[Fr.Exc.]	Allows you to specify the <a href="#">frequency to be excluded</a> from scanning. The button is red if the table contains
frequencies.	
[Preset]	Click <a href="#">Preset</a> to manage the database of pre-set scan.
[Start]	Start the search
[Stop]	Interrupt the search
[Min.Sig.]	Minimal intensity of signal them because it is considered valid
[Pause 1]	Pause in seconds after to have found a signal and before resuming the search: 0 = Wait until that SQL passes in ON -1 = Use the resume of the IC-7100 and ignore Pause 2
[Pause 2]	Pause in seconds before passing to the successive frequency after that SQL is returned ON.
[Log]	Enable/disable <a href="#">scansion log</a>
[Record]	Enable/disable the audio recording. The key is active only if it is active the <a href="#">audio support</a> .
[View Log]	<a href="#">scansion log</a>

**ATTENTION: all the frequencies are in Hz.**

## OnAir

### Funzioni

[Top](#) [Previous](#) [Next](#)

On Air

[Primo Precedente P](#)

Send via internet the On-Air status with frequency and operating mode in [HrdLog](#)  
If enabled, it adds some CAT features to HrdLog

[Enable] Enable / disable the automatic sending of the state

[Callsign] Callsign used in HrdLog

[Code] Enter the upload code received at registration on HrdLog

[Radio] Enter a descriptive text of the transceiver, if blank will be sent the description of the selected radio in configuration

[Mode] Mode, if blank will be sent to the current operating mode

[Refresh] Interval in seconds for sending a new state

[Send Now] Send status immediately

[Enable Cat] Enable the CAT interface to HrdLog, for example clicking on the frequency in the cluster page tunes the rtx (requires Microsoft .NET Framework 4)

[DX Cluster] Opens in the browser [HrdLog DX clusters](#)

On-Air operation requires an internet connection

More information about the On-Air are available on [HrdLog](#)

## Voice

### Funzioni

[Top](#) [Previous](#) [Next](#)

#### Voice

[Primo](#) [Precedente](#) [Prossimo](#)

Split	Mem	Scan	Skeds	Bands	Auto CQ	Voice	Plug-In	On-Air	Set Mode	Utility	◀ ▶
1	IZ2BKT Inglese	Tx	Loop	5		Tx	Loop	Stop			
2	IZ2BKT Italiano	Tx	Loop	6		Tx	Loop	Interval s.			
3		Tx	Loop	7		Tx	Loop	5			
4		Tx	Loop	8		Tx	Loop	Auto Monitor	<input checked="" type="checkbox"/>		

Transmits Voice memories stored in RTX

[Tx] Start transmission

[Loop] Repeats the transmission every specified seconds at interval

[Stop] Stop transmission now

[Auto Monitor] Activates the RTX monitor when it transmits

[Interval s.] Seconds of pause between transmissions when I turn on the Loop

## Hook Clipboard

### Functions

[Top](#) [Previous](#) [Next](#)

#### Hook Clipboard

[Top](#) [Previous](#) [Next](#)

To activate the Hook Clipboard means to intercept the data that are copied in the clipboard of Windows through the command Copy or pressing CTRL+C after having selected a text. After having intercepted them, they are analyzed and, if considered valid, that is that they contain an inclusive number in the range of frequency of the Icom 7000, they are used for setting frequency and operational mode in accord with the settaggio of the limits of band and mode.

The principal purpose of this function is I data exchange data with programs DXCluster.

Example of use with the program RxClus:

- 1) Activate the function Hook Clipboard
- 2) Activate RxClus
- 3) When it passes an interesting spot, select the frequency and press the keys Ctrl+C, the RTX will be planned on this frequency.

DX de G1HWY:	28689.0	K7QQ	WA	1551Z
DX de IK7AFM:	28654.8	N4ZZ	TN	1551Z
DX de IZ8BRI:	28690.0	WA4TII		1604Z

Frequenza selezionata, premere Ctrl+C

For a correct exchange of data it is necessary to correctly shape the parameters <Communication with the Clipboard> in the [mask of configuration](#), besides to use the mask of [Setting Limits of band and mode](#) to select the mode of transmission corrected in base to the frequency of the spot.

### PTT

[Top](#) [Previous](#) [Next](#)

Click on the microphone for switch transmission/reception, or, to press the chosen key in [configuration](#).

- [Setup] Open [the mask of configuration of the PTT](#)
- [Tune] Selects operating mode and power [configuration](#) switch in transmi:  
the seconds configurate
- [Auto Tune] Start or Stop the automatic antenna tuner.
- Tx Time  
Reset the counter time of TX
- [Partial] Time of transmission from the start of this session of the program
- [Total] Time of transmission from the last time [Reset]

## Recorder audio

### Functions

[Top](#) [Previous](#) [Next](#)

#### AudioRecorder

[Top](#) [Previous](#) [Next](#)

The AudioRecorder is a digital recorder. For a corrected operation it must connect the audio card of the PC with the RTX (to see [connection](#)), one just chosen of the CoDec is also a lot important to use for the recording (to see [audio configuration](#)).

#### [Audio configuration](#)

**Starts/stops the recording.**

**Suspends/resumes the recording or the reproduction.**

**Starts/stops the reproduction.**

**[Record only if SQL OFF]** If checked, it starts the recording only in presence of a and suspended when the signal interrupts (SQL ON)

**[File]** It is possible to specify a file audio, if he leaves AUTO, to the beginnin will be produced a file by the name BKTymmddhmmss.WAV, where mmmonth, ddday, hhhour, mmminute, sssecond of beginning recordir AUTO and starting the play is opened a window from which to select tl

## QuickSet

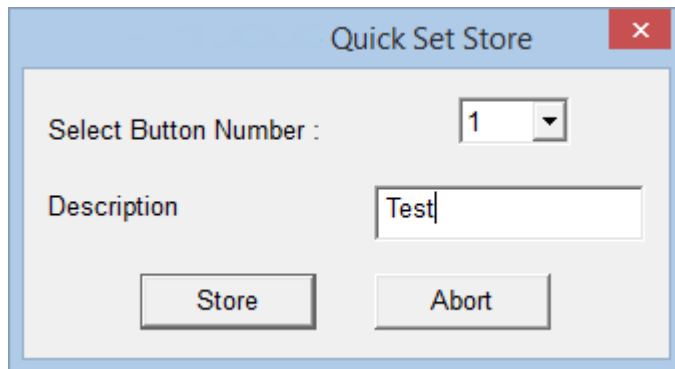

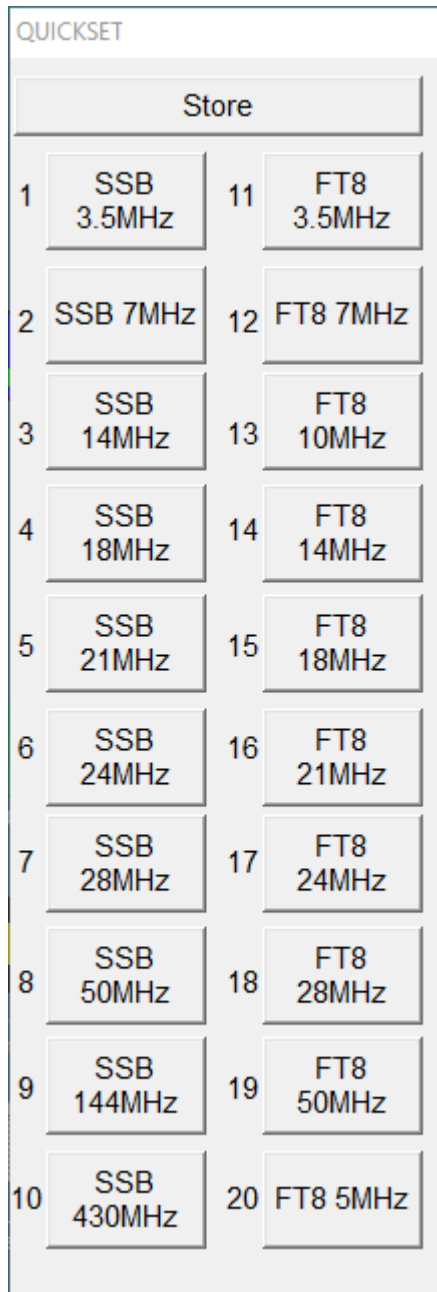

### Functions

[Top](#) [Previous](#) [Next](#)

#### QuickSet

[Top](#) [Previous](#) [Next](#)

Each of the 20 keys stores: Frequency, Mode, VFO in use, Attenuator, Preamp, SQL, Power, RF, Filter, NR, NB and ANF.

Pressing the [Store] saves the current values of Frequency, Mode, VFO in use, Attenuator, Preamp, Squelch, Power, RF, Filter selected, NR, NB ANF and Compressor Mic State in the chosen key.

[Port Com.]	LAN port of communication
[Local IP]	If you have multiple LAN cards you can specify the local IP address.
[Enable Audio Support]	Enables the receipt/ transmission of the audio. For a correct working the server pc must have the audio card connected to the RTX, the pc client uses the microphone to transmit. Is not possible transmit audio file
[Send audio only when the PTT is ON]	Will transmit the audio from the client toward the server only when the PTT is active, this allows to have a lower band transmission
[Audio input]	Select the audio card which the microphone is connected on and enable the microphone entry from Windows mixer
[Audio output]	Select the audio card where to listen to the audio received from the server, regulate the volume using Windows mixer
[Password]	Password connection, only used if required by the server

## BKTServer

### BKTServer

[Top](#) [Previous](#) [Next](#)

BKTServer must be in execution on the remote computer attached to the RTX.

[Serial Port Configuration]

Specify the parameters of connection with the RTX.

[Server Options]

Data Port:

Port LAN of listening and communication (default = 7060) (she must be opened by the firewall).

Autostart in system tray: He starts the server automatically and reduces it to icon in the system tray.

IP:

IP address of listening, if 000.000.000.000 BKTServer automatically selects the IP of the first net interface. Attention him IP choosing must be associate to a network interface of the computer where is in execution BKTServer.

[PTT]

Specifies the PTT parameters (see PTT configuration in the help of the program IC706\_BKT.)

Not used for the Icom IC-7000 and IC-7100.

Change Language: Program language to use.

Check for update: Check if new version its available. Need a internet connection.

[Audio Stream Configuration]

Specify the parameters audio, increasing the values of Bits/sample and Samples/sec it will increase the fidelity of the audio but it needs greater band. Increase the Buffers if loss audio packets.

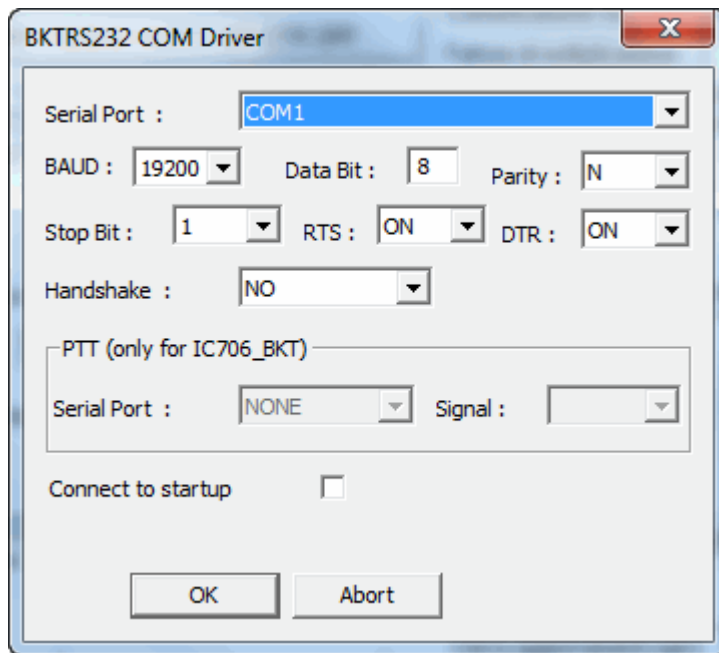

Enable password: if set only client with correct Password is available to connect.

## Interfacing with other programs

### Interfacing with other programs

[Top](#) [Previous](#)

IC7300BKT includes a DDE server compatible with the suite DXLab that allows you to communicate with different programs including [MultiPSK](#), FLDigi with [Fldigi-DXLab Gateway](#) installed, [JT65\\_HF](#), SpotCollector and other compatible with Commander of DXLab suite.

**For a proper functioning of the DDE server requires that the program IC7300BKT is executed BEFORE any other program.**

If DDE doesn't work, it's possible to enable the LAN Protocol in the configuration to [use IC7300BKT with JTDX, WSJT-X, JS8CALL, MSHV](#), etc...
